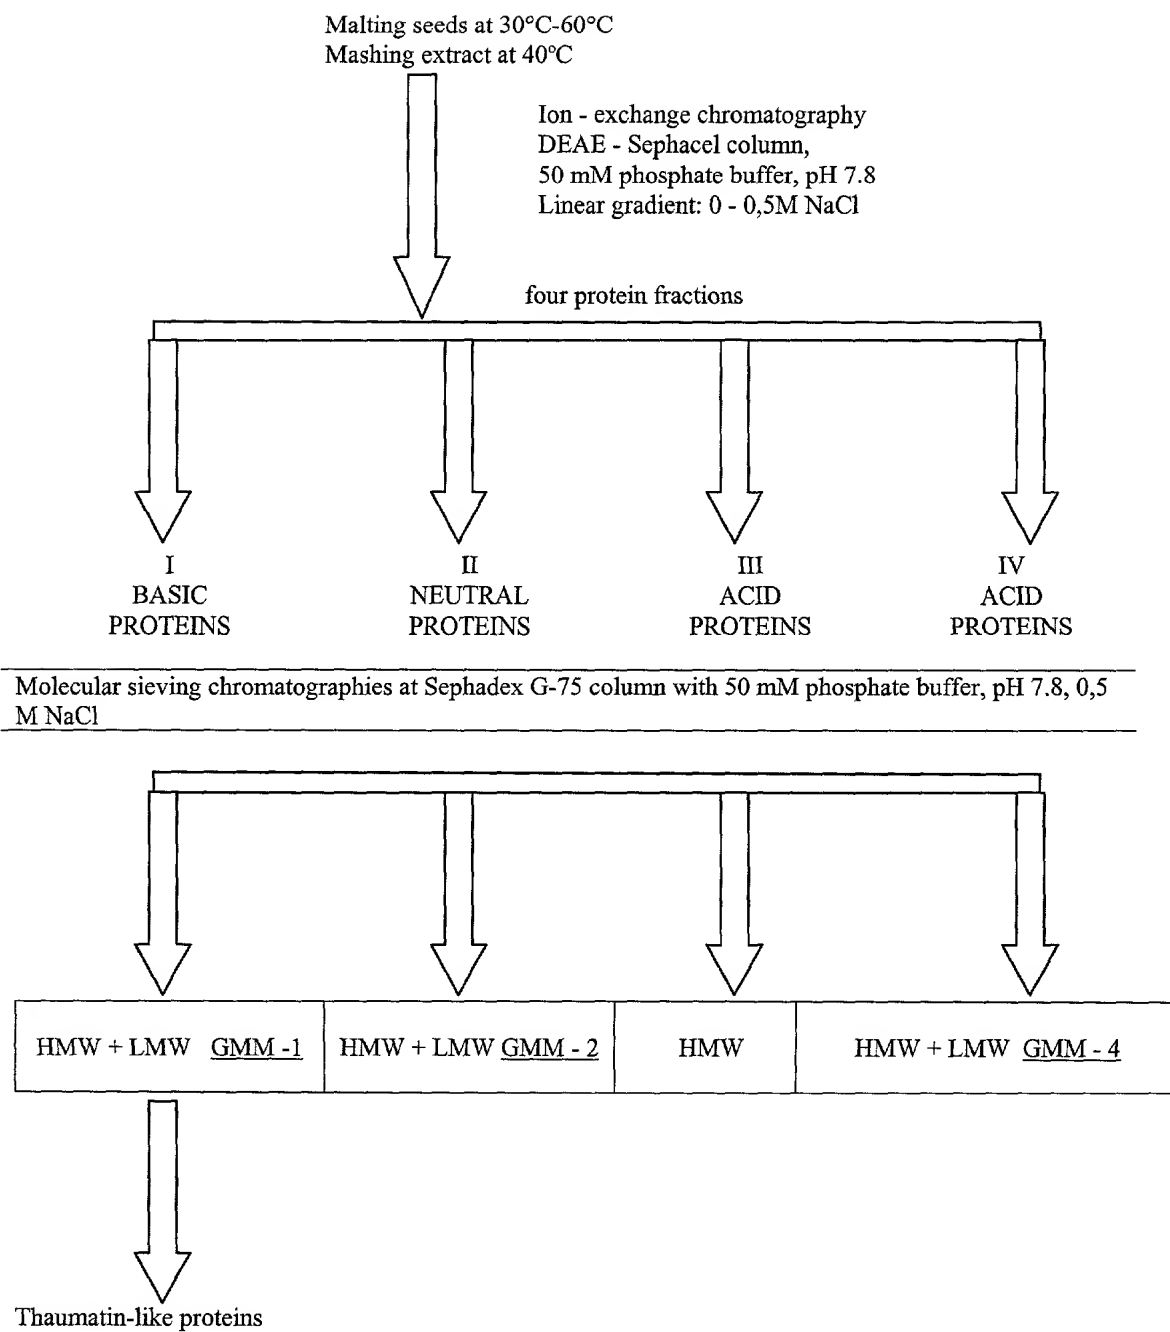

Figure 1

Figure 2: Fermentation Rates. This graph shows the volume of CO₂ produced (ml) over time (minutes) for four different fermentation conditions. The y-axis ranges from 0 to 100 ml, and the x-axis ranges from 0 to 60 minutes. The four conditions are represented by different symbols: solid circles (●), solid squares (■), open triangles (△), and open circles (○). The solid circle series shows the highest rate of CO₂ production, reaching approximately 92 ml at 60 minutes. The solid square series follows, reaching about 72 ml. The open triangle series reaches about 32 ml, and the open circle series reaches about 14 ml. The graph includes a grid and labels for both axes.
